

Reproduced false success: 4.02% spectrum error

$w_0 = -1.0389272676$, $w_a = 0$, $\Omega_m = 0.3156$; bins 4×5 , $\ell = 355.655882$

CCL returns GSL_SUCCESS after 41 evaluations; the refined references agree.

CoCoA 96 $\rightarrow$ 1024 nodes per panel changes its own spectrum by 0.0016%.

The common-reference CoCoA offset also includes different kernel and interpolation conventions.

CoCoA covariance-module spectra, not ordinary data-vector integration. Deliberate control; not a failure frequency.
